ISO and social responsibility

• ISO has launched the development of the future ISO 26000 standard providing voluntary guidance on social responsibility (SR).

• ISO 26000 will be for organizations of all types in both public and private sectors, in developed and developing countries.

• ISO 26000 will add value to existing SR work by:
  – developing an international consensus on what SR means and the SR issues that organizations need to address,
  – providing guidance on translating principles into effective actions, and
  – refining best practices that have already evolved and disseminating the information worldwide for the good of the international community.
ISO 26000 will add value to existing initiatives for social responsibility by providing harmonized, globally relevant guidance based on international consensus among expert representatives of the main stakeholder groups and so encourage the implementation of best practice in social responsibility worldwide.

What is ISO 26000?

ISO 26000 is the designation of the future International Standard giving guidance on social responsibility (SR). It is intended for use by organizations of all types, in both public and private sectors, in developed and developing countries. It will assist them in their efforts to operate in the socially responsible manner that society increasingly demands.

Why is ISO 26000 important?

Sustainable business for organizations means not only providing products and services that satisfy the customer, and doing so without jeopardizing the environment, but also operating in a socially responsible manner. Pressure to do so comes from customers, consumers, governments, associations and the public at large. At the same time, far-sighted organizational leaders recognize that lasting success must be built on credible business practices and the prevention of activities such as fraudulent accounting and labour exploitation.

On the one hand, there has been a number of high-level declarations of principle related to SR and, on the other, there are many individual SR programmes and initiatives. The challenge is how to put the principles into practice and how to implement SR effectively and efficiently when even the understanding of what “social responsibility” means may vary from one programme to another.

ISO’s expertise is in developing harmonized international agreements based on double levels of consensus: among the principal categories of stakeholder, and among countries (ISO is a network of the national standards bodies of 157* countries).

The future ISO 26000 will distil a globally relevant understanding of what social responsibility is and what organizations need to do to operate in a socially responsible way.

What will ISO 26000 contain?

The detailed content of ISO 26000 will evolve throughout its development process. The current* working document covers the following:

Foreword
Introduction
1 Scope
2 Terms and definitions
3 Understanding social responsibility
4 Principles of social responsibility
5 Recognizing social responsibility and engaging stakeholders
6 Guidance on social responsibility core subjects
7 Guidance on implementing practices of social responsibility
Annex A – Social responsibility initiatives
Bibliography
Index

* At 1 July 2008
The guidance in ISO 26000 is intended to be clear and understandable, even to non-specialists, objective, and applicable to all types of organization, in both private and public sectors.

**How will ISO 26000 relate to existing good work?**

The guidance in ISO 26000 will draw on best practice developed by existing public and private sector SR initiatives. It will be consistent with and complement relevant declarations and conventions by the United Nations and its constituents, notably the International Labour Organization (ILO), with whom ISO has established a Memorandum of Understanding (MoU) to ensure consistency with ILO labour standards. ISO has also signed an MoU with the United Nations Global Compact Office (UNGCO) to enhance their cooperation on the development of ISO 26000 and with the Organisation for Economic Co-operation and Development (OECD) to ensure consistency with OECD guidelines.

**How did the ISO 26000 initiative come about?**

The need for ISO to work on an SR standard was first identified in 2001 by ISO/COPOLCO, Committee on consumer policy. In 2003, the multi-stakeholder ISO Ad Hoc Group on SR which had been set up by ISO’s Technical Management Board (TMB) completed an extensive overview of SR initiatives and issues worldwide. In 2004, ISO held an international, multi-stakeholder conference on whether or not it should launch SR work. The positive recommendation of this conference led to the establishment in late 2004 of the ISO Working Group on Social Responsibility (WG SR) to develop the future ISO 26000 standard.

**Who is developing ISO 26000?**

Eighty* countries and 39* organizations with liaison status are participating in the WG SR under the joint leadership of the ISO members for Brazil (ABNT) and Sweden (SIS). The main stakeholder groups are represented: industry, government, labour, consumers, nongovernmental organizations, service, support, research and others, as well as a geographical and gender-based balance of participants.

**When will ISO 26000 be ready?**

ISO 26000 is currently targeted for publication in late 2010.

**What will ISO 26000 achieve?**

ISO 26000 will integrate international expertise on social responsibility – what it means, what issues an organization needs to address in order to operate in a socially responsible manner, and what is best practice in implementing SR. ISO 26000 will be a powerful SR tool to assist organizations to move from good intentions to good actions.
